I believe the biggest opportunities look like bad ideas at first and by the time they make sense to everyone, they're no longer opportunities.

EXPERIENCE

Jul 2021 — Won the RoboCup Junior World Championship

My first-ever robotics competition. Built a fully automated robotic band, and competed against teams from across the globe.

Feb 2022 — Founded a Student Business in 9th Grade

My first-ever robotics competition. Built a fully automated robotic band, and competed against teams from across the globe.

2023 — Built a Bank-Card Sized Cybersecurity Computer

An 4-layer 1MHz single board computer that locks sensitive storage based on trusted network proximity — preventing data ex-filtration the moment a device leaves a secure zone.

2nd place, National Science & Innovation Olympiad.

Jan – Apr 2024 — Co-developed and Patented the World's First Self-Driving Wheelchair

Achieved fully autonomous indoor navigation in under two months and partnered with Europe's largest healthcare manufacturer. Built large action models before they were even a thing.

3rd place, National Science & Innovation Olympiad.

2024 — Founded an AI Ed-Tech Startup, Got Acquired at 18

Hungary's first AI virtual teacher, fine-tuned on the national curriculum. Got 5k+ students in the first month, leading to an acquisition by the Hungarian Ministry of Education.

2nd place, National Science & Innovation Olympiad.

Feb 2025 – present — Lead AI Developer at the Hungarian Ministry of Education

Leading AI development and research, scaling a system for millions of users per month and working with large vector databases.

2025 — Trained a Model That Invents Through Recombination

Built and trained a state-of-the-art model that can invent new solutions by learning to combine what it already knows into concepts it has never seen before.

Jan 2026 – present — Building an Always-On AI That Acts Without Being Asked

Training models for edge inference and intent detection — knowing when to act and when to stay silent.

Launching on the App Store in Q2 2026.

EDUCATION

Közgazdasági Politechnikum

High school · Budapest · 2020 – 2025

Draper University

Startup Incubator · San Francisco · 2024

Budapest University of Technology and Economics

University · Budapest · Dropped Out

BACKGROUND

I started learning physics in 2nd grade, competing in contests against kids years older than me.

In 5th grade, I got the opportunity to play the lead role in Billy Elliot — the world's largest children's role — at the Hungarian State Opera House. Three years of 40+ hour weeks taught me more about discipline, pressure, and performing under expectation than anything before or since. I went on to perform in three other musicals, but when the pandemic hit and the stages went dark, I came back to the thing I'd always loved: building.

I'm self-taught, with 6 years of programming experience across 17+ languages.
